A Brand New Bazeport Made for You

The Bazeport media platform is continuously updated and improved as part of our ongoing product design and development. When you enter a Bazeport Service Agreement, you are entitled to new software releases and updates for your purchased software licences.

About this release

These are the release notes for Bazeport version 10, including news and updates for the Bazeport software. Version 10 (V10) introduces a completely new user interface for the Bazeport media platform. All changes, improvements, and bug fixes have been tested and are ready for deployment. All relevant Bazeport documentation has been updated accordingly and is available within Bazeport Management Studio. If you need a copy sent to you via email, please request it from support@bazeport.com.

The commercial release date is 16. September 2025.

Bazeport 10 represents a major upgrade across all setups and versions.

The most noticeable change is a sharp new user interface, accessible on any device running Android OS. Bazeport adopted Android as the main OS starting with Bazeport 9. This version is available on our set-top boxes CT-2191, CT-2211, and now the CT-3251. All legacy Bazeport set-top boxes can operate with Bazeport 10, and those with Android will also receive the new UI. Note: CT-2191 and CT-2211 units currently using Linux OS can be converted to Android (change of OS). The CT-3251 is exclusive to the Android platform.

Highlights:

- Bazeport 10: Upgrade across all setups and versions.
- New UI: Crisp interface available on devices running Android OS
- Android lineage: Introduced with Bazeport 9 available on CT-2191, continued with CT-2211, and latest CT-3251.
- Legacy support: All legacy set-top boxes can run Bazeport 10.
- UI availability: The new UI applies only when the box runs Android OS.
- Migration option: CT-2191/CT-2211 on Linux can be converted to Android (change of OS).

Our commitment

We are committed to constantly enhancing Bazeport through new software updates. Running the latest version guarantees optimal performance, user experience, and allows us to offer full support.

We would like to thank our customers, partners, and our skilled team for their contributions to Bazeport Media Software version 10. This release is made for you. Please continue sharing your feedback and suggestions with us at support@bazeport.com.

Thank you for being part of the Bazeport community.

Bazeport 10: Modern Design, Powerful Experience

Here's what's new:

Modern, Intuitive Interface

Bazeport 10.0 comes with a sleek, modern design that is as intuitive as it is refined. Everything is built for simplicity, clarity, and ease of use – a fresh look that feels just right.

Smarter Home Screen

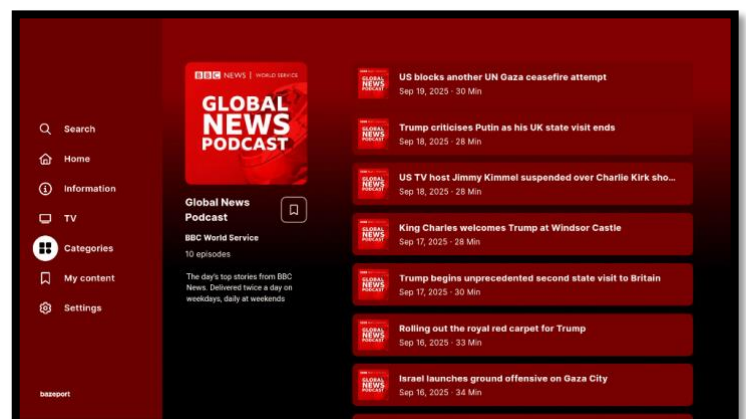

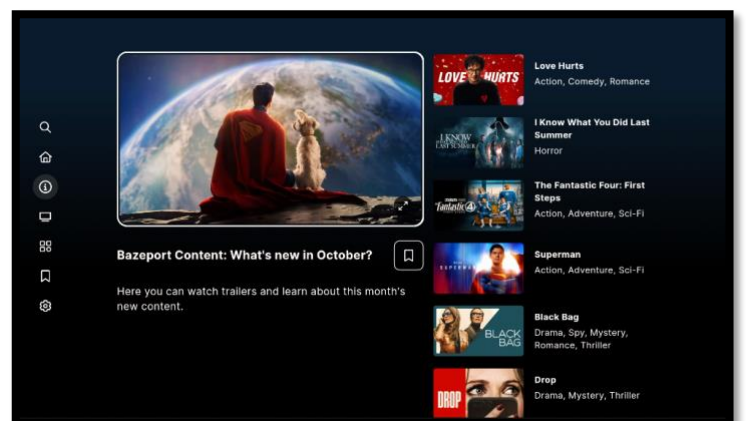

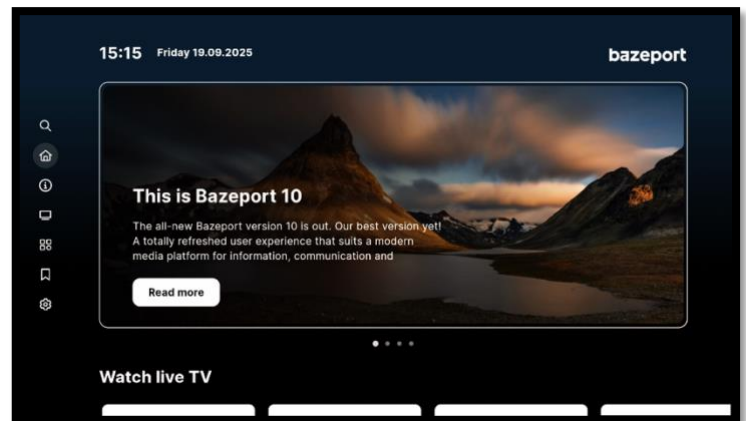

Your home screen has been improved. You can now access all Bazeport features by simply scrolling down – everything neatly organised in a clean, stylish layout. The sidebar menu remains available for quick access.

Enhanced Information Display

Displaying updates has never been easier. A new information carousel on the home screen makes information more visible, engaging, and easy to access at a glance. Important information stays front and centre – clear, attractive, and impossible to miss.

White Label Customisation

Personalise your interface. With enhanced white-label options, you can easily adapt the design to match your branding. Add your logo and brand colour for a bespoke touch that remains sophisticated – ensuring a polished appearance that's just right.

Upgrade now!

Who can upgrade?

All customers with a valid **Bazeport Service Agreement (BSA)** are entitled to the Bazeport 10 upgrade as part of our ongoing product commitment. The rollout is automatic and over-the-air—no on-site work required—and will be released gradually starting in September 2025. No action is needed on your side.

New UI availability:

The new, crisp user interface in Bazeport 10 is available on devices running Android OS (e.g., CT-2191/CT-2211/CT-3251 on Android and all Android-based TV sets with Bazeport Native app).

Devices running Linux will receive the Bazeport 10 platform upgrade and improvements, but will keep the current UI unless migrated to Android. *CT-2191 and CT-2211 units on Linux can be converted to Android (change of OS).*

If you don't yet have a BSA but want to upgrade your current installation, please contact support@bazeport.com

Software compatibility

If your system is not running on Android OS, the upgrade should only be performed after consulting your system administrator or your Bazeport support provider. If you need to know the status of your current Bazeport Service Agreement, please ask us by sending an email to: support@bazeport.com

Hardware compatibility

Bazeport 10 can be used with the following Bazeport units:

- Bazeport set-top box model CT-2191, CT-2211, CT-3251 and all TV sets running Bazeport native app.

The following set-top box model are end-of-support / end-of-life but can still run Bazeport 10: CT-2151, CT-2152, CT-128, CT-126, CT-125, CT-114, CT-113. CT-116 touch screen "all-in-one model" can also use the Bazeport 10 without the touchscreen feature. Bazeport 10 requires the use of a remote control.

- Bazeport Native App in combination with Philips professional Android TV models: MediaSuite 5014/5114/5214 series and MediaSuite 6014/6114/6214 series.
- The following Philips professional hospitality TV models are end-of-life but can still run Bazeport 10, but without full functionality: MediaSuite 5011 series and MediaSuite 5010 series.
